

# Content Management Systems for mobile, context-dependent augmented reality applications

Dipl.-Ing. Mario Lengheimer, BSc  
FH CAMPUS 02, Austria

[www.tourism-student-conference.com](http://www.tourism-student-conference.com)

# Content

# Challenge

- Provide augmented reality (AR) technologies to enhance mobile marketing activities
- Different persons → different ages, different interests

# ...in the context of tourism

Lack of information .. events,  
exhibitions, sights, special offers

No filtering possible with  
common advertisements

## Enhance advertisements on billboards

Little information and/or  
information overload

Challenge

Solution

Scanning advertising space  
with mobile device

Showing information which fits  
to the user's interests

## Filtering content

Retrieve further information, book tickets...

Supported by images,  
videos or 3D animations

# Purpose

Design and develop an overall system architecture, to...

- manage AR content using **contextual** and **personal** information
  - **enhance** marketing activities
- reach high **acceptance** and high **customer value**

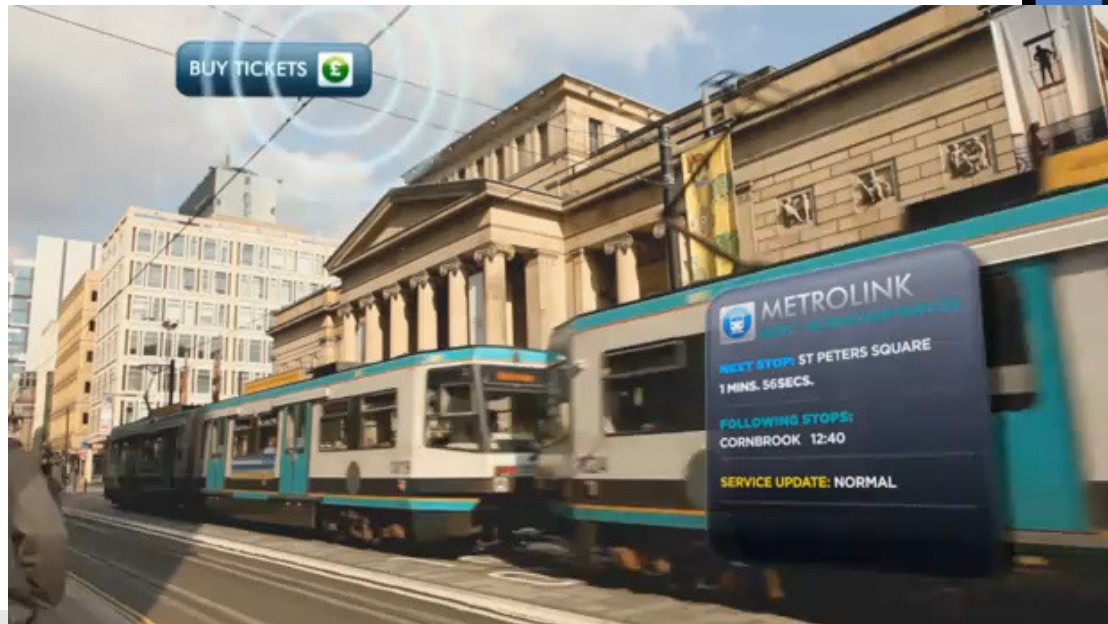

# Content

# Augmented Reality

# Augmented Reality

Source: <http://www.doit-mobile.com>

# Available systems and features

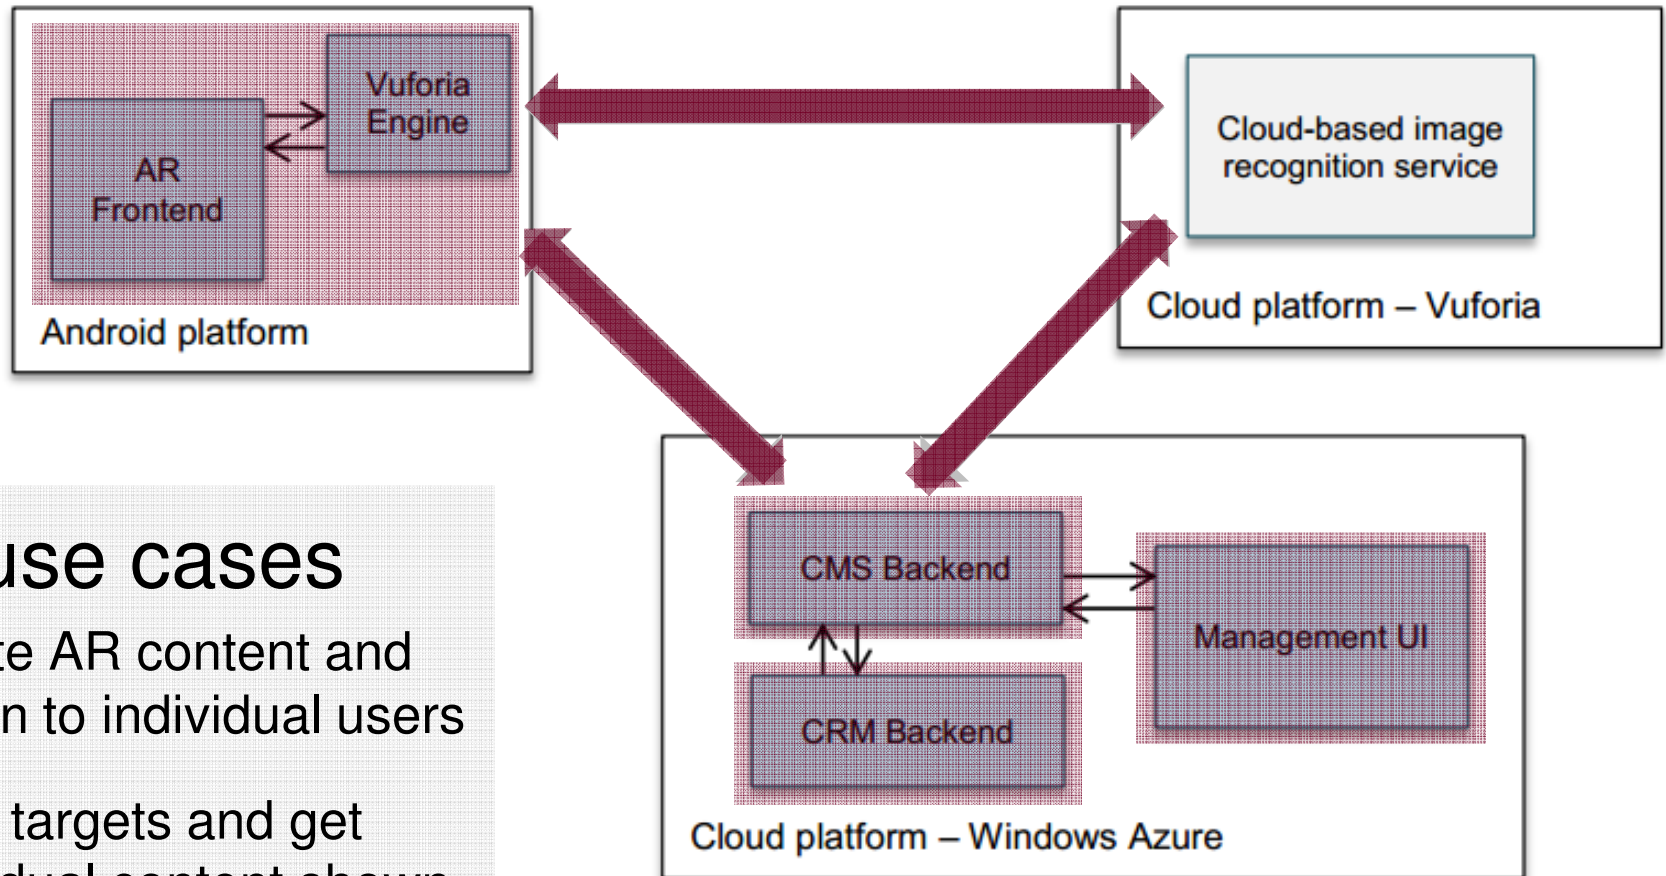

- Few content management systems exist
- Only one content for one target
- No combination with customer relationship management
- Not context-dependent
- Not personalized

# Content

# Components and use cases

## Two use cases

- Create AR content and assign to individual users
- Scan targets and get individual content shown

# Context information used

Location

ABCDEFGHIJ  
KLMNOPQRS  
TUVWXYZ  
1234567890

Language

User's age, interest, gender...

Date, Time, Weekdays...

# Content

# Key findings

## Findings

Necessity of **reducing information overload**

**No systems** for creating personalized AR content **available** on the market

Proven system architecture to **manage individual AR content**

## Challenges

Necessity of being **always online**

Requires high speed (3G) connection

Make value transparent to end users and **increase awareness**

Create standard interfaces

# Thank you for your attention
